

CAPILANO RIVER REGIONAL PARK EAST TRAIL

Capilano River Regional Park is heavily used by tourists and residents. LEES+Associates were retained to provide an assessment for an improved and expanded trail on the east side of the river. The assessment detailed environmental features, adjacent land uses, property ownership and apparent encroachment, connections and relationships to other trails and transportation routes and opportunities and constraints. The final plan provided two preliminary concepts, along with an order of magnitude cost estimate.

The final report is intended to provide a document that can be shared with stakeholders, property owners, and agencies to communicate the intentions for the new trail.

TRAIL ASSESSMENT
