

# WATERSHED PARK INTERPRETIVE SIGNAGE

LEES+Associates provided conceptual and detailed design and specifications for trail signage and entry signs for this popular Delta park. This project entailed the development of a strategy to accommodate different user groups including pedestrians, cyclists and equestrians.

This project included a trail management report for Watershed Park with signage and wayfinding as the main components of the study. On-site assessments, consultations, finalization of signage details and design, and an order of magnitude costing for implementation were completed by our team. The project deliverables also included a full tender set as well as construction administration services.
