

## MASTER TRAIL PLANS

LEES+Associates collaborated with IMBA to develop Master Trail Plans for Echo Valley and Blackstrap Provincial Parks in Saskatchewan. The team surveyed both sites using Trimble GPS data loggers and ESRI mapping software. Reliable field data allowed the team to conduct an existing trail assessments and propose a new trails system (using the Parks Canada classification system). The Master Trail Plans include an implementation plan, design guidelines and cost estimates to allow for a phased, multi-year build-out. The consulting team undertook engagement with the public and trail user groups, to help enrich the Trails Plans with, community outreach and education strategies, policy implications and future planning steps.
