

FROMME MOUNTAIN SUSTAINABLE TRAIL CLASSIFICATION PLAN

The Fromme Mountain Area trail network developed as a mix of informal social trails, purpose built trails and relic logging skid roads with little formal planning.

LEES+Associates was commissioned to lead the development of the Fromme Mountain Sustainable Trail Use Classification Plan. The Plan was based on significant collaboration with District Staff and Council, and consultations with a broad range of local stakeholder groups and trail users including mountain bike riders, dog walkers, hikers, back country mountaineers and equestrians.

A comprehensive trail rating and classification system was generated, including new trail construction standards and maintenance Best Management Practices that aim to balance environmental protection with recreational activity.

TRAIL CLASSIFICATION PLAN
