

# TERRACE ACTIVE TRANSPORTATION PLAN

LEES+Associates worked with the City of Terrace to prepare the City's first Active Transportation Plan. The community was engaged early in the planning process through a bikeability tour, walkabout and community mapping workshop to identify issues and possible solutions.

Our team recommended 51 multi-use, pedestrian, and cycling improvements to increase options for active transportation as an attractive and viable means of commuting throughout the city.

Main themes for the plan included making active transportation more safe, convenient and appealing, reducing greenhouse gas emissions, improving year-round tourism appeal and improving walking and cycling facilities on routes to school.
